USE AND COMPOSITION OF THE STONE KIT BY STONE ITALIANA

Composed by:

No. 3 150 ml bottles:

- **STONE CLEANER - spray** (neutral detergent)
- **STONE TILE CLEANER** (slightly acidic cleaner)
- **JAIPUR STONE PROTECTOR** (countertops protector)

Stone Italiana countertops are absorption resistant; however, all stains should be removed within 16 hours of their formation.

After countertops installation

Use exclusively the neutral detergent **STONE CLEANER - spray** to clean the countertops for the first 4 days after its installation; then it will be possible to use common household cleaners available on the market.

DAILY CLEANING INSTRUCTIONS

Product needed:

- **STONE CLEANER - spray** (neutral detergent)
- Use the neutral detergent **STONE CLEANER - spray** (undiluted) or any other common household cleaners avoiding the use of any aggressive products, which might remove the coat protection, otherwise it is necessary to renew it
- Wet the countertop surface homogeneously with the detergent, rub gently with the soft side of a yellow / green sponge, rinse thoroughly and dry with a cloth.

EXTRAORDINARY CLEANING AND RESTORATION OF THE COUNTERTOPS PROTECTION

Products needed:

- **STONE TILE CLEANER** (slightly acidic cleaner)
- **JAIPUR STONE PROTECTOR** (countertops protector)

The products available in the Stone Kit have been specifically designed and developed for Stone Italiana. They are like no other cleaning and protective products available on the market today. The use of products other than Stone Italiana is not recommended for the extraordinary cleaning and treatment of the countertops.

EXTRAORDINARY CLEANING

Instructions

Product needed:

- **STONE TILE CLEANER** (slightly acidic cleaner)

Should the daily cleaning not be effective or in case of stubborn dirt caused by hard water,

red wine, sparkling wine, coffee, tea, blood, cooking oils, tomato sauce, food residues, substances containing sugar, fatty and greasy substances, hot oil spills, we recommend cleaning the surface with **STONE TILE CLEANER** (slightly acidic cleaner).

- Wet the surface uniformly with a 30% solution of **STONE TILE CLEANER** (one part of **STONE TILE CLEANER** and two parts of water) and allow to stand for about 10 minutes
- Gently rub the surface with the green side of a yellow / green sponge, until all dirt is removed from the surface
- Rinse thoroughly
- Dry with a cloth

In case of stubborn stains, apply undiluted **STONE TILE CLEANER** directly to a yellow / green sponge, rub gently with the green side of the sponge and rinse thoroughly.

Should an "extraordinary cleaning" be performed it might be necessary to renew the countertop protection; the need to reapply the protection depends on the wear and tear of a countertop. The restoration of the protection might be required not more than once a year. In this case, clean the surface with undiluted **STONE TILE CLEANER** and then apply **JAIPUR STONE PROTECTOR** (countertop protector) as instructed here below.

EXTRAORDINARY RESTORATION OF THE COUNTERTOP PROTECTION

Instructions

Products needed:

- **STONE CLEANER - spray** (neutral detergent)
 - **STONE TILE CLEANER** (slightly acidic cleaner)
 - **JAIPUR STONE PROTECTOR** (countertops protector)
-
- Wet the surface uniformly with undiluted **STONE TILE CLEANER** and allow to stand to about 10 minutes
 - Gently rub the surface with the green side of a yellow/green sponge, until all dirt is removed from the surface
 - Rinse thoroughly
 - Dry with a cloth
 - With a clean dry cloth, uniformly apply a thin coat of **JAIPUR STONE PROTECTOR**
 - Wait for at least 5 minutes and then start rubbing the surface with another soft cotton cloth, until the counter top looks bright and matt in tonality.
 - Do not leave any excess of **JAIPUR STONE PROTECTOR** (like oily spots) on the surface
 - Allow the countertop to dry out naturally for at least 12 hours (overnight) before using it. We recommend the use of **STONE CLEANER - spray** (neutral detergent) to clean the countertop for the first 4 days after the renewal of the protection; it will then be possible to use again common household cleaners available on the market.

POLISHED QUARTZ SURFACES

Stone Italiana countertops are absorption resistant; however, all stains should be removed within 16 hours from their formation.

DAILY CLEANING

Instructions

Product needed:

- **STONE CLEANER - spray** (neutral detergent)
- Use the neutral detergent **STONE CLEANER - spray** (undiluted) or any other common household cleaner
- Wet the countertop surface uniformly with the detergent, rub gently with the soft side of a yellow/green sponge, rinse thoroughly and dry with a cloth.

EXTRAORDINARY CLEANING

Instructions

Products needed:

- **STONE CLEANER - spray** (neutral detergent)
- **STONE TILE CLEANER** (slightly acidic cleaner)

The products available in the Stone Kit have been specifically designed and developed for Stone Italiana. They are like no other cleaning and protective products available in the market today. The use of products other than Stone Italiana is not recommended for the extraordinary cleaning and treatment of the countertops.

Should the daily cleaning not be effective or in case of stubborn dirt caused by hard water, red wine, sparkling wine, coffee, tea, blood, cooking oils, tomato sauce, food residues, substances containing sugar, fatty and greasy substances, hot oil spills, we recommend cleaning the surface with **STONE TILE CLEANER** (slightly acidic cleaner), except for quartz containing mother of pearl on which you may only use **STONE CLEANER - spray** (neutral detergent).

- Wet the surface uniformly with a 30% solution of **STONE TILE CLEANER** (one part of **STONE TILE CLEANER** and two parts of water) and allow to stand for about 10 minutes
- Gently rub the surface with the green side of a yellow/green sponge, until all dirt is removed from the surface
- Rinse thoroughly
- Dry with a cloth

In case of stubborn stains, apply undiluted **STONE TILE CLEANER** (except on quartz containing mother of pearl) directly to a yellow/green sponge, rub gently with the green side of the sponge and rinse thoroughly.

NOTE

Superblack: there might be a sort of slight visible abrasion effects due to its purity in colour and tonality if compared to light colours of Stone Italiana collection.

FAQ - STONE ITALIANA COUNTERTOPS

Can I cut food on a Stone Italiana countertop?

Stone Italiana surfaces are abrasion resistant. However, we recommend using a chopping board to cut food. Although our countertops are scratch resistant, metal can leave marks on their surface.

Can I place hot irons or pans straight from the cooker onto the countertop?

Stone Italiana surfaces can withstand dry heat up to 140° C. However, the various types of pans and pots currently available on the market, with 2-, 3- and even 4- layer base for optimal heat conduction, can easily reach temperatures well above 140° C. Therefore, as with any countertop surface, hot pots and pans (including coffee pots and ovenware) should always be placed on a trivet or hot pad. Avoid direct contact with hot items: thermal shock can result in a crack.

Will the countertop change its appearance over time?

No, Stone Italiana quartz surfaces are designed to remain unchanged over time, as long as the cleaning and maintenance instructions provided by Stone Italiana are followed.

Which cleaning and care products should I avoid?

- Alkaline and basic products: these products can irreparably discolour the surface of POLISHED materials.
- Harsh wax removers/strippers, harsh or aggressive cleaners, high-solvent products, alcohol, acetone, alkaline products and stain removers: these products can irreparably discolour the surface of JAIPUR 14.15, GRAIN, JUTA and ROCFACE finishing materials.
- Detergents containing Sodium hypochlorite: these products can irreparably discolour the surface of JAIPUR 14.15, GRAIN, JUTA ROCFACE and POLISHED finishing materials.
- Cleaners containing Marseille soap or silicones (usually referred to as Polysiloxane on product labels): the use of these products will result in the formation of an opaque film permeable to dirt in the POLISHED surfaces and may irreparably discolour the surface of JAIPUR 14.15, GRAIN, JUTA, ROCFACE finishing materials.
- Clean & Wax products: the use of these products will result in the formation of an opaque film permeable to dirt in the JAIPUR 14.15, GRAIN, JUTA, ROCFACE and POLISHED surfaces. If these products have been used, try to clean the surface with **STONE TILE CLEANER** (do not use on materials containing mother of pearl).
